

HFpEF Case Reports in Clinical Cardiology

Heart failure with preserved ejection fraction (HFpEF) is a complex and increasingly recognized subtype of heart failure characterized by typical heart failure symptoms despite a normal or near-normal left ventricular ejection fraction. **Case Reports and Case Series in Cardiology Journal** invites the submission of **HFpEF case reports and case series in clinical cardiology** that highlight rare presentations, diagnostic complexities, comorbid associations, and evidence-based management strategies.

This dedicated section focuses on clinically relevant cases involving **diastolic dysfunction, preserved systolic function**, and challenging patient scenarios that contribute to improved understanding and treatment of HFpEF in daily cardiology practice.

We welcome manuscripts on:

- HFpEF with diastolic dysfunction
- Elderly patient HFpEF case reports
- Hypertension-associated HFpEF
- Obesity-related HFpEF
- Diabetes and metabolic syndrome in HFpEF
- Atrial fibrillation with HFpEF
- Pulmonary hypertension associated with HFpEF
- Rare diagnostic and imaging findings
- Echocardiography-based HFpEF cases
- Novel pharmacological management
- Complex comorbidity case series
- Long-term follow-up outcomes

At **Case Reports and Case Series in Cardiology Journal**, we encourage authors to submit rare, educational, and clinically significant HFpEF cases that improve diagnosis, risk stratification, and therapeutic decision-making in clinical cardiology.

Why Publish With Us?

- Rapid peer-review process
- DOI allocation for every article
- International editorial support
- Global visibility
- Ideal platform for advanced clinical cardiology case reports

Manuscript Submission

Authors are requested to submit their manuscript by using Online Manuscript Submission

Portal: <https://www.casereportsincardiology.org/submit.html> (or) also invited to submit through the Journal

E-mail Id: editor@casereportsincardiology.org.
